▶ A roadmap to investing in 2023:

How should investors think about positioning portfolios in an environment with high inflation, higher rates and slower growth?

Source: Columbia Threadneedle Investments. There are risks associated with fixed-income investments, including credit risk, interest rate risk, and prepayment and extension risk. In general, bond prices rise when interest rates fall and vice versa. This effect is usually more pronounced for longer term securities. Municipal securities will be affected by tax, legislative, regulatory, demographic or political changes, as well as changes impacting a state's financial, economic or other conditions. Mortgage- and asset-backed securities are affected by interest rates, financial health of issuers/originators, creditworthiness of entities providing credit enhancements and the value of underlying assets. In general, equity securities tend to have greater price volatility than debt securities. The market value of securities may fall, fail to rise or fluctuate, sometimes rapidly and unpredictably. Value securities may be unprofitable if the market fails to recognize their intrinsic worth or the portfolio manager misgauged that worth. Investments in small-cap companies involve risks and volatility greater than investments in larger, more established companies.
